

📄 Word Scramble Game

A terminal-based word unscrambling game written in pure Python

MIT LICENSE

PYTHON 3.7+

NO DEPENDENCIES

Overview

Each round shows you a scrambled version of a hidden word. Guess the correct word to earn points and build a streak. Stuck? Ask for a hint. The project uses only Python's standard library, with no external packages required.

Features

- Pure Python standard library only (no pip install needed)
- Random word selection and fair letter shuffling
- Score, attempt counter, and streak tracking
- Built-in hint system
- Clean, well-commented code — great for beginners

Demo

```
#####
#      WORD SCRAMBLE GAME      #
#  Unscramble the letters!    #
#####

=====
Score: 0   Tries: 0   Streak: 0
=====

Scrambled word:  EDNALP
(type HINT for a clue, or QUIT to exit)

Your answer: PLANET

Correct! +10 points!
```

Requirements

Python 3.7 or later. No third-party packages are used.

Clone the repository

Run the game

On some systems you may need `python3` instead of `python`.

- A scrambled word appears in the terminal
- Type your guess and press Enter
- Type HINT at any time to reveal a clue for the current word
- Type QUIT to exit and reveal the answer
- After each correct guess, choose whether to continue to the next word

Open `word_scramble.py` and edit the `WORD_LIST` list near the top of the file:

Words are automatically uppercased when compared, but it's good practice to write them in uppercase in the list for consistency.

github.com/your-username/word-scramble-python

```
python -m unittest discover tests
```

Contributing

Contributions are welcome. Fork the repo, create a feature branch, and open a pull request. For larger changes, please open an issue first to discuss what you'd like to change.
